# SAFETY PRECAUTIONS

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by △ in the Schematic Diagram and Replacement Parts List.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

#### **General Guidance**

An **isolation Transformer should always be used** during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and it's components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Due to high vacuum and large surface area of picture tube, extreme care should be used in **handling the Picture Tube.** Do not lift the Picture tube by it's Neck.

## X-RAY Radiation

Warning:

The source of X-RAY RADIATION in this TV receiver is the High Voltage Section and the Picture Tube.

For continued X-RAY RADIATION protection, the replacement tube must be the same type tube as specified in the Replacement Parts List.

To determine the presence of high voltage, use an accurate high impedance HV meter.

Adjust brightness, color, contrast controls to minimum.

Measure the high voltage.

The meter reading should indicate

23.5  $\pm$  1.5KV: 14-19 inch, 26  $\pm$  1.5KV: 19-21 inch, 29.0  $\pm$  1.5KV: 25-29 inch, 30.0  $\pm$  1.5KV: 32 inch

If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.

#### Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

### Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between 1M $\Omega$  and 5.2M $\Omega$ .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

#### Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

# Do not use a line Isolation Transformer during this check.

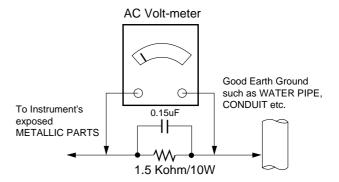

Connect 1.5K/10watt resistor in parallel with a 0.15uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which is corresponds to 0.5mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

#### Leakage Current Hot Check circuit

# SERVICING PRECAUTIONS

CAUTION: Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the SAFETY PRECAUTIONS on page 3 of this publication.

*NOTE*: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

#### **General Servicing Precautions**

- Always unplug the receiver AC power cord from the AC power source before;
  - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
  - Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
  - Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.
    - **CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
  - d. Discharging the picture tube anode.
- Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe.
   Do not test high voltage by "drawing an arc".
- 3. Discharge the picture tube anode only by (a) first connecting one end of an insulated clip lead to the degaussing or kine aquadag grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touch the other end of the insulated clip lead to the picture tube anode button, using an insulating handle to avoid personal contact with high voltage.
- Do not spray chemicals on or near this receiver or any of its assemblies.
- Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength)

**CAUTION:** This is a flammable mixture.

Unless specified otherwise in this service manual, lubrication of contacts in not required.

- Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
- Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
- Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead
  - Always remove the test receiver ground lead last.
- 9. Use with this receiver only the test fixtures specified in this service manual.

**CAUTION:** Do not connect the test fixture ground strap to any heat sink in this receiver.

#### **Electrostatically Sensitive (ES) Devices**

Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called *Electrostatically Sensitive (ES) Devices*. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques

should be used to help reduce the incidence of component damage caused by static by static electricity.

- Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.
- After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
- Use only a grounded-tip soldering iron to solder or unsolder ES devices.
- Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
- 5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
- Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

## General Soldering Guidelines

- Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range or 500° F to 600° F.
- 2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
- 3. Keep the soldering iron tip clean and well tinned.
- Thoroughly clean the surfaces to be soldered. Use a mall wirebristle (0.5 inch, or 1.25cm) brush with a metal handle.
   Do not use freon-propelled spray-on cleaners.
- 5. Use the following unsoldering technique
  - a. Allow the soldering iron tip to reach normal temperature. (500° F to 600° F)
  - b. Heat the component lead until the solder melts.
  - c. Quickly draw the melted solder with an anti-static, suctiontype solder removal device or with solder braid. CAUTION: Work quickly to avoid overheating the circuitboard printed foil.
- 6. Use the following soldering technique.
  - a. Allow the soldering iron tip to reach a normal temperature  $(500^{\circ} \, \text{F to } 600^{\circ} \, \text{F})$
  - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.

- c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
  - **CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
- d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

#### IC Remove/Replacement

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

#### Removal

- Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
- Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

#### Replacement

- 1. Carefully insert the replacement IC in the circuit board.
- Carefully bend each IC lead against the circuit foil pad and solder it.
- Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

# "Small-Signal" Discrete Transistor Removal/Replacement

- Remove the defective transistor by clipping its leads as close as possible to the component body.
- Bend into a "U" shape the end of each of three leads remaining on the circuit board.
- 3. Bend into a "U" shape the replacement transistor leads.
- 4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

# Power Output, Transistor Device Removal/Replacement

- 1. Heat and remove all solder from around the transistor leads.
- 2. Remove the heat sink mounting screw (if so equipped).
- Carefully remove the transistor from the heat sink of the circuit board.
- 4. Insert new transistor in the circuit board.
- 5. Solder each transistor lead, and clip off excess lead.
- 6. Replace heat sink.

## Diode Removal/Replacement

- Remove defective diode by clipping its leads as close as possible to diode body.
- Bend the two remaining leads perpendicular y to the circuit board.
- Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
- 4. Securely crimp each connection and solder it.
- Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

# **Fuse and Conventional Resistor**

### Removal/Replacement

- Clip each fuse or resistor lead at top of the circuit board hollow stake.
- Securely crimp the leads of replacement component around notch at stake top.
- 3. Solder the connections.

**CAUTION:** Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

#### Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

#### At IC Connections

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

- Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
- carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
- 3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
- 4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

#### At Other Connections

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

- Remove the defective copper pattern with a sharp knife.
   Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
- Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
- Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side.

Carefully crimp and solder the connections.

**CAUTION:** Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

# **SPECIFICATION**

NOTE: Specifications and others are subject to change without notice for improvement.

## 1. Application range

This specification is applied to AL-03HA chassis.

# 2. Requirement for Test

Testing for standard of each part must be followed in below condition.

(1) Temperature:  $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ (2) Humidity:  $65\% \pm 10\%$ 

- (3) Power: Standard input voltage (AC 100-260V, 50/60Hz)
- (4) Measurement must be performed after heat-run more than 15min.
- (5) Adjusting standard for this chassis is followed a special standard.

# 3.General Specification

No.	Item	Specification	Remark
1	Receiving system	ATSC/64 & 256 QAM/NTSC-M	SILM-VSB
2	Available Channel	VHF: 02 ~ 13	
		UHF: 14 ~ 69	
		CATV : 01 ~ 135	
		DTV: 02 ~ 69	
3	Input voltage	AC 100 - 260V/ 50Hz,60HZ	
4	Screen Size	42 inch wide

# **ADJUSTMENT INSTRUCTION**

# 1. Scope of Application

These specifications are applied to all LCD TV models employing an AL-03HA chassis.

## 2. Instruction

- (1) Since this chassis is insulated from the power supply, it is not mandatory to use an insulated-core transformer. But for the protection of adjustment devices, it is recommended to power up the chassis between the power line and the chassis input stage.
- (2) Adjustment should be performed exactly in accordance with the instructed sequence.
- (3) Unless otherwise specified, adjustment should be done at an ambient temperature 25° ±5°C and relative humidity of 65° ±10%.
- (4) During adjustment, the power supply to the TV set should be maintained at 220V and 60Hz.
- (5) Unless otherwise specified, heat-run the set by leaving it powered up for about 15 minutes before adjustment.
- During preliminary heat-run, the 100% White Pattern (CH 06) should be displayed (or '3. White Pattern' of Ez-Adjust).
- How to Get White Pattern
- (1) Push ADJ KEY on the adjustment remote controller and enter Ez-Adjust.
- ② Select '3. White Pattern' with CH +/- KEY and push CONFIRM (■) KEY. Then the 100% Full White Pattern will appear.
  - \* In this mode, you can heat run the set without a separate signal generator.

(Caution) If a static display is turned on for more than 20 minutes, particularly the in-house digital pattern (CH 13) or the cross hatch pattern (CH 09), care should be taken as an after-image may develop on the black level part of the screen.

# 3. Adjustment

- Download EDID (Extended Display Identification Data) and DDC (Display Data Channel).
- (2) Adjust AD9883A-Set.
- (3) Adjust color temperature (white balance).
- (4) Adjust main and sub color.

# 4. Adjustment

# 4.1. Download EDID (Extended Display Identification Data) and DDC (Display Data Channel)

(1) Established by VESA, EDID is a function created to implement "Plug and Play" that sets and makes available user environments by allowing the PC and the monitor to automatically communicate and exchange data with other without requiring the user to directly give commands to either the PC or the monitor.

#### (2) EDID data for DVI of AL-03HA

# 4-2. Adjust AD9883A-Set

#### 4.2.1 Overview

AD9883A-Set adjustment is a function to automatically set the optimum black level and gain in the analog-to-digital converter and compensate for RGB deviation.

#### 4.2.2 Devices Used

Adjustment remote controller and 801GF (802B, 802F, 802R) pattern generator.

The latter should be capable of outputting the 720P vertical 100% color bar pattern as shown below and its output level should be calibrated at  $0.7\pm0.1$ Vp-p.

Be careful not to confuse the said pattern with the 75% color bar in the neighborhood.

<Fig. 2> Adjustment pattern: 720P vertical color bar

# 4.2.3 Method of Adjustment

- Input the 720P mode 100% vertical color bar pattern (TVBAR-100) that can be supported at a component input terminal, select Component 1 or Component 2 for input, and select an appropriate display.
- Wait one second or longer after signal reception, get into 'Ez-Adjust' by pushing ADJ KEY on the adjustment remote controller, select 1.AD9883-Set, and push +KEY.
  - Adjustment will be carried out automatically.
- When adjustment is completed normally, the message 'AD9883—Set' will be displayed. Otherwise, 'AD9883A Setup Error' will appear instead.
- If adjustment is not completed normally, repeat after checking the pattern or adjustment conditions.
- When adjustment is completed, escape adjustment mode by pushing the ADJ KEY.

# 4.3 Adjust Color Temperature (White Balance)

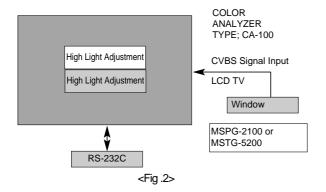

#### (1) Devices Used

Color analyzer (CA-100 or equivalent)

Automatic adjustment device (Necessary for automatic adjustment. Should be compatible with RS-232C communication.)

AV pattern generator

(2) Instrument Interconnection (For automatic adjustment)

#### (3) Method of Adjustment

- Perform zero calibration on CA-100, which should remain perfectly attached to the LCD module surface during adjustment
- Manual adjustment should be done in the following sequence.
- 1) Press the Power On remote controller kev.
- Press the IN-START remote controller key. Then, select '4. UART Control' to see if the baud rate is 115200.
- 3) Press the ADJ remote controller key to enter the 'Ez Adjust' mode.
- 4) Select '7. WHITE PATTERN' using CH + / key and press the OK key for a heat run longer than 15 minutes.
- The AV Pattern Generator supplies the Window pattern signal. (external input mode)
- 6) Set the image control state to "Comfortable image."
- 7) Put the sensor close to the center of the screen and press the ADJ remote controller key. Then, select '5. White-Balance' in 'Ez Adjust' and press the right arrow key (▶) to start the adjustment mode.
- 8) Adjust High Light using R Gain / B Gain.
- 9) Use the volume + or key for adjustment.

(G Gain: 127 / R Cut: 63 are the fixed value.)

Brightness value: High Light = 150± 10 Cd

Color coordinate:  $X = 0.271 \pm 0.003$ ,  $Y = 0.279 \pm 0.003$ 

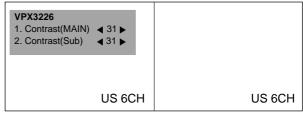

Color temperature: 12.000° K ±500° K

10) Press the OK ( •) key to move to the 'Ez Adjust' screen when adjustment is completed. Then, press the ADJ key to exit from the adjustment mode.

# 4.4 Adjust Main and Sub Color

This adjustment will reduce color difference between the main and sub displays in PIP, POP, and SPLIT screen modes.

- Input the in-house signal, wait one second or longer after signal reception, get to 'Ez-Adjust' by pushing ADJ KEY, select '2.
   VPX3226' and get to the adjustment mode by pushing the right-hand side (▶) key.
- Get to the adjustment mode, and the display will automatically become a TV 6CH SPLIT screen. A window will appear as follows.

 At first adjust '1. Contrast (Main)' in such a way that the characters "US 6CH" on the left-hand side of the main display are most distinct and clear (and not saturated), and then

Adjust '2. Contrast (Sub)' in such a way that the brightness of the sub display on the right-hand side is the same as the main display. Use the volume +/- key for adjustment.

 When adjustment is completed, escape adjustment mode by pushing ADJ KEY.

# **EDID ADJUSTMENT**

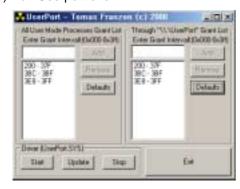

Windows EDID V1.0 User Manual

Operating System: MS Windows 98, 2000, XP Port Setup: Windows 98 => Don't need setup

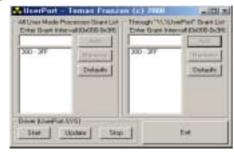

Windows 2000, XP => Need to Port Setup.

This program is available to LCD Monitor only.

- 1. Port Setup
  - a) Copy "UserPort.sys" file to "c:\WINNT\system32\drivers" folder
  - b) Run Userport.exe

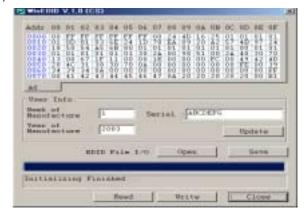

- c) Remove all default number
- d) Add 300-3FF

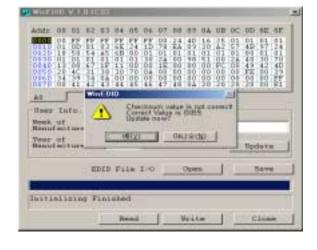

- e) Click Start button.
- f) Click Exit button.

- 2. EDID Read & Write
  - 1) Run WinEDID.exe

- 2) Edit Week of Manufacture, Year of Manufacture, Serial Number
  - a) Input User Info Data
  - b) Click "Update" button
  - c) Click "Write" button

# **SVC REMOE CONTROLLER**

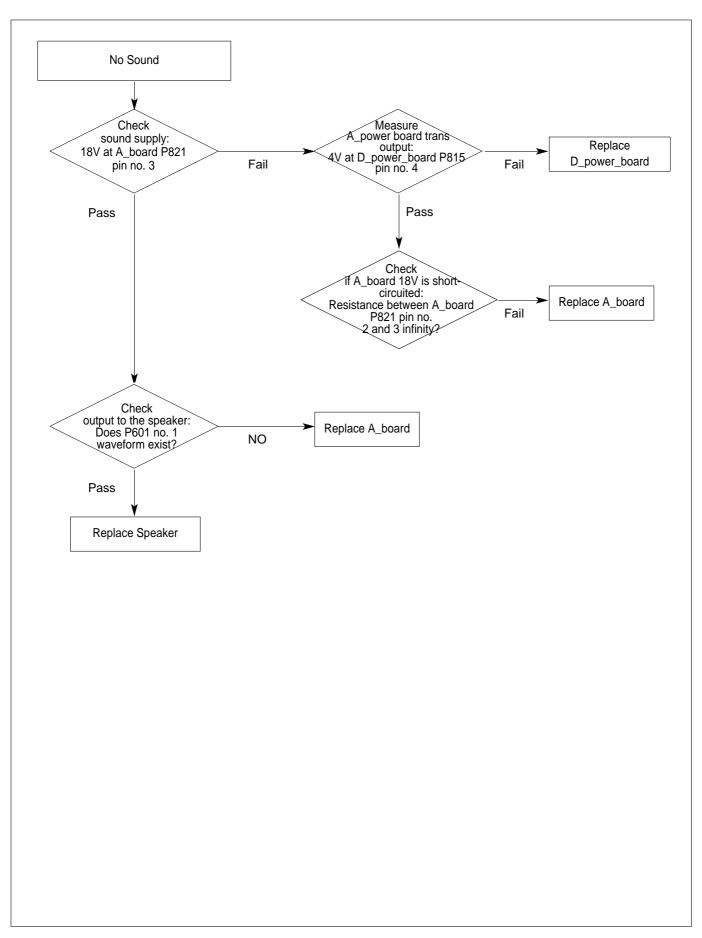

NO	KEY	FUNTION	REAMARK
1	POWER	To turn the TV on or off	
		To turn the TV on automatically if the power is supplied to the TV. (Use the	
2	POWER ON	POWER key to deactivate): It should be deactivated when delivered.	
3	MUTE	To activate the mute function.	
4	P-CHECK	To check TV screen image easily.	Shortcut keys
5	S-CHECK	To check TV screen sound easily	Shortcut keys
6	ARC	To select size of the main screen (Normal, Spectacle, Wide or Zoom)	Shortcut keys
7	CAPTION	Switch to closed caption broadcasting	
8	TXT	To toggle on/off the teletext mode	
9	TV/AV	To select an external input for the TV screen	
10	TURBO SOUND	To start turbo sound	
11	TURBO PICTURE	To start turbo picture	
		To enter adjustment mode when manufacturing the TV sets.	Use the AV
		To adjust the screen voltage (automatic):	key to enter
12	IN-START	In-start $\rightarrow$ mute $\rightarrow$ Adjust $\rightarrow$ AV(Enter into W/B adjustment mode)	the screen W/B
		W/B adjustment (automatic):	adjustment
		After adjusting the screen →W/B adjustment →Exit two times (Adjustment completed)	mode.
13	ADJ	To enter into the adjustment mode. To adjust horizontal line and sub-brightness.	
14	MPX	To select the multiple sound mode (Mono, Stereo or Foreign language)	
15	EXIT	To release the adjustment mode	
16	APC(PSM)	To easily adjust the screen according to surrounding brightness	
17	ASC(SSM)	To easily adjust sound according to the program type	
18	MULTIMIDIA	To check component input	Shortcut keys
19	FRONT-AV	To check the front AV	Shortcut keys
20	CH±	To move channel up/down or to select a function displayed on the screen.	
21	VOL±	To adjust the volume or accurately control a specific function.	
22	ENTER	To set a specific function or complete setting.	
23	PIP CH-(OP1)	To move the channel down in the PIP screen.	
23	1 11 011-(01 1)	To use as a red key in the teletext mode	
24	PIP CH+(OP2)	To move the channel in the PIP screen	
		To use as a green key in the teletext mode	
25	PIP SWAP(OP3)	To switch between the main and sub screens	
		To use as a yellow key in the teletext mode	
26	PIP INPUT(OP4)	To select the input status in the PIP screen	
		To use as a blue key in the teletext mode	
27	EYE	To set a function that will automatically adjust screen status to match	
		the surrounding brightness so natural color can be displayed.	
28	MENU	To select the functions such as video, voice, function or channel.	
29	IN-STOP	To set the delivery condition status after manufacturing the TV set.	
30	STILL	To halt the main screen in the normal mode, or the sub screen at the PIP screen.	
	· · · · · · · · · · · · · · · · · · ·	Used as a hold key in the teletext mode (Page updating is stopped.)	
31	TIME	Displays the teletext time in the normal mode	
		Enables to select the sub code in the teletext mode	
32	SIZE	Used as the size key in the PIP screen in the normal mode	
		Used as the size key in the teletext mode	
33	MULTI PIP	Used as the index key in the teletext mode (Top index will be	
		displayed if it is the top text.)	
		To select the position of the PIP screen in the normal mode	
34	POSITION	Used as the update key in the teletext mode (Text will be	
		displayed if the current page is updated.)	1
35	MODE	Used as Mode in the teletext mode	
36	PIP	To select the simultaneous screen	
37	TILT	To adjust screen tilt	Shortcut keys
38	0~9	To manually select the channel.	i .

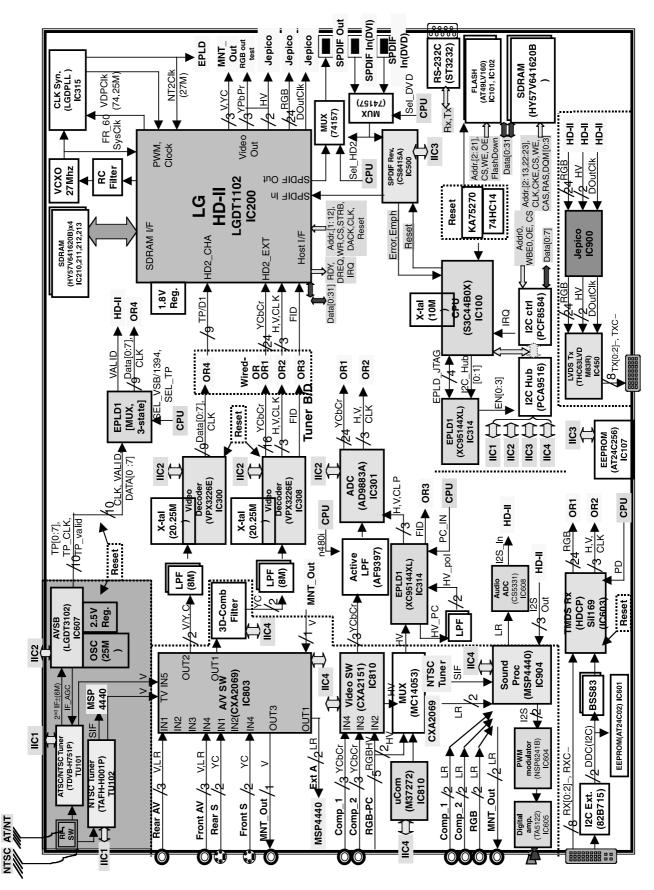

# **TROUBLESHOOTING**

# **BLOCK DIAGRAM**

# **BLOCK DIAGRAM DESCRIPTION**

ATSC/NTSC tuner (TDVB-001P) can receive both terrestrial analog and terrestrial digital signals.

But a NTSC tuner (6700NFNS06C) can receive terrestrial analog only. Therefore if you run two displays at the same time, it is not possible to see two digital channels.

A/V SW (CXA2069) is the IC that takes external input terminal signals and broadcast signals from the tuners and handles them selectively. Audio signals are

sent to MSP4450. Video signals are sent to HD-II via two paths - VPX3226E on the upper side is used to handle sub displays, while VPX3225E on the lower

side controls the main display.

To the lower side, signals are sent using an expensive 3D-comb filter with Y/C divided.

The video decoder (VPX3226E) is a chip that decodes input signals.

HD-II is a chip that controls nearly all video-related functions, including brightness, sharpness, video formatting and scaling. If digital broadcasting is available,

it comes through TP, which can be controlled from HD-II.

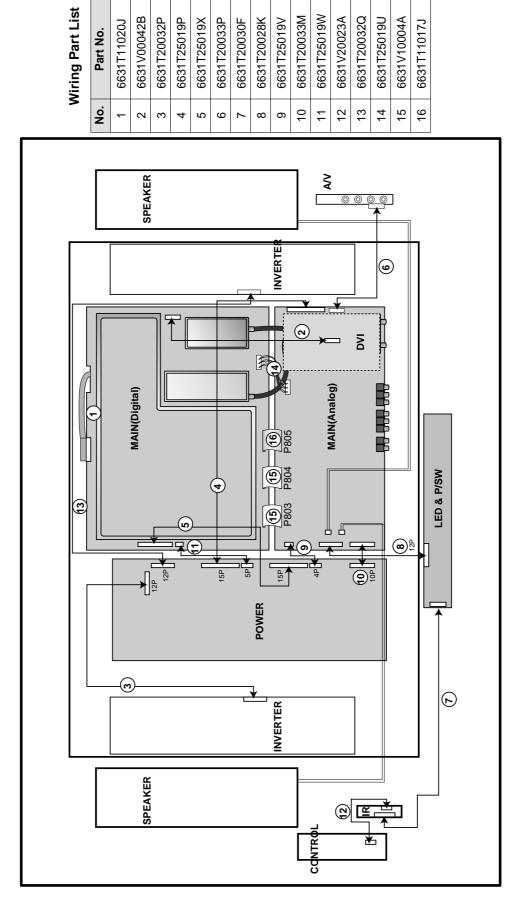

Video SW (CXA2151) is an IC that outputs video signals selectively. The selected one is outputted through ADC (AD9883A) as a digital signal.

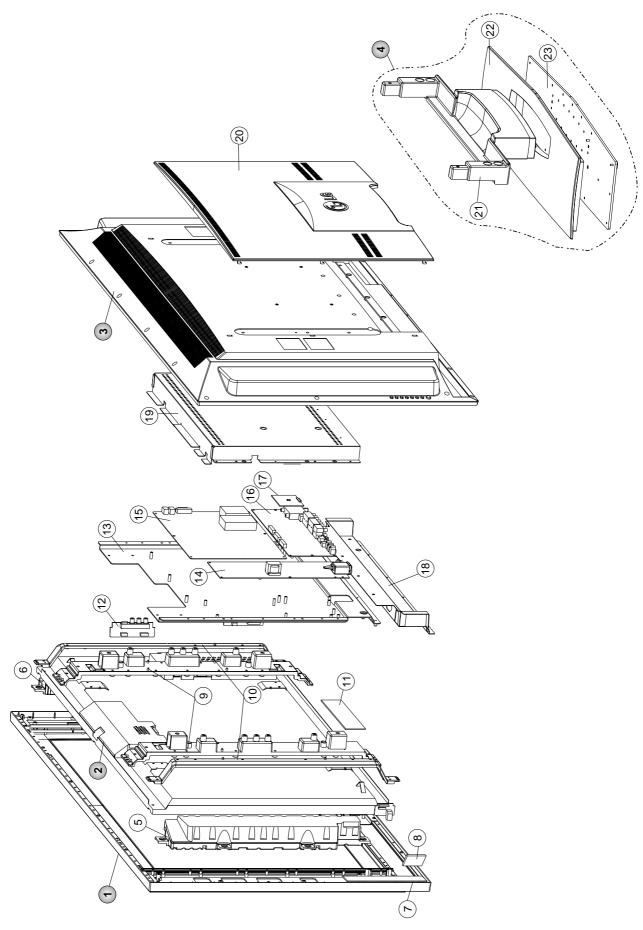

uCom (M37272) interfaces with the main CPU and primarily plays the role of controlling power supply, remote controller and timers. Thus, while the set is

turned off, it sends time information to uCom for management.

TMDS Tx (Sil164) is the display stage that sends video data to the display medium according to the TMDS protocol, and the TMSD receiver accepts it and outputs display.

CPU (S3C440BX) is the central processing IC, which controls most of the ICs.
